DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C.

121:

- I. Claims 1-9, drawn to a "method of preparing a low allergic (sic) natural rubber latex", classified in class 435, subclasses 267 and 272, and class 528, subclasses 931, 932 and 933.
- II. Claims 10-17, drawn to a "method of preparing a low allergic (sic) natural rubber latex", classified in class 435, subclasses 267 and 272, and class 528, subclasses 931, 932 and 933.
- III. Claims 18-21, drawn to a "low allergic (sic) natural rubber", classified in class 528, subclasses 934 and 935.
- IV. Claims 22-25, drawn to a "low allergic (sic) natural rubber", classified in class 528, subclasses 934 and 935.

The inventions are distinct, each from the other because of the following reasons:

Inventions of Group I and Group II are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions the different inventions, as listed, fail to claim the same or corresponding special technical features. The inventions are not disclosed as being capable of use together and possess different characteristics which have different functions and

Art Unit: 1711

effects, as well as have different modes of operation. The Group II invention requires an additional step which would affect the patentability of the claims.

Inventions of Group III and Group IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions, as listed, fail to claim the same or corresponding special technical features. The inventions are not disclosed as being capable of use together and possess different characteristics which have different functions and effects, as well as have different modes of operation. Each Group requires a different set of characteristics, and, as such, define patentably distinct inventions.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

A telephone call was made to Andrew D. Meikle on 22 January 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed. The Title is too long.

A substitute specification with the claims is required pursuant to 37 CFR 1.125(a) because the Specification is written in broken, non-idiomatic English.

A substitute specification filed under 37 CFR 1.125(a) must only contain subject matter from the original specification and any previously entered amendment under 37 CFR 1.121. If the substitute specification contains additional subject matter not of record, the substitute specification must be filed under 37 CFR 1.125(b) and must be accompanied by: 1) a statement that the

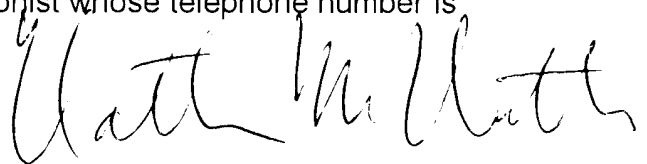

Art Unit: 1711

substitute specification contains no new matter; and 2) a marked-up copy showing the amendments to be made via the substitute specification relative to the specification at the time the substitute specification is filed.
